Melville, NY 11747, USA

Dear Ms. Costello:

I am writing to you regarding the Java Developer role that was advertised on Handshake recently. After reading the job detail, I believe that I have the qualifications that you are looking for.

I am currently a senior student in Stony Brook University pursuing my BS degree in the field of Computer Science. In June 2017, I will receive my degree and start a new page of my journey. Before transferring to Stony Brook, I spent two years in SUNY Polytechnic Institute, formerly known as SUNYIT. Over there, I maintained my GPA above 3.8. I was listed on the President's list for two semesters in SUNY Poly and Dean's List for the Fall 2015 semester in Stony Brook.

In this semester, I became an Undergraduate teaching assistance for an introductory Java class. In order to obtain this position, I was required to have an overall GPA above 3.0 and deep understanding about Object-Orientated Programming. During the Lab section, my partner and I are responsible to help and answer student's question regarding to Java, and make sure they can have a successful starting in the field of Computer Science.

I also conducted several programming projects over my academic career. These projects can prove my skills and abilities as a Computer Science student. In 2015, I finished my ePortfolio Webpage Generator. It is a Java application that allows user to create and edit their personal ePortfolio webpage. When the user finishes editing, the application will export all the data and generate websites using JQuery and Json. This project can strongly prove my abilities as a Java Application Developer as well as a Website Developer. Besides the ePortfolio Generator, I also finished several other projects such as Seawolf Script and MiniAT Kiosk. Both these projects suggest my strong understanding in computer fundamentals, algorithms and system level design.

As my enclosed resume explains, I have the qualifications to all the skills you are looking for. Besides Java and the front-end web technologies, I also have the knowledge in Python, MySQL and PHP, which proved me the ability to do server side programming. Also, I have completed courses such as Software Engineering and Operating System. these courses not only helped me gained new knowledges, but also made me a reliable colleague to work with. I understand how to work in groups and communicate efficiently with my pairs. I am also fluent in writing in Chinese and speaking in Mandarin.

I would be delighted to have an opportunity to discuss in person with you about the detail of the job. Please feel free to contact me at any time via phone or e-mail. I appreciate your time and consideration.

Sincerely,

Wenjun Qu
